Education

India Institute of Information Technology Senapati, Manipur
CSE with specialization in (AI and DS)

Sept 2023 – May 2027

- GPA: 7.05/10.0

Projects

Daily Notes Tracker

[GitHub](#) | [Live](#)

- Developed a full-stack daily notes tracking web application within a **monorepo** architecture.
- Implemented **React** with **Tailwind CSS** for the frontend, and **Node.js + Express** with **Prisma ORM** and **PostgreSQL** for the backend.
- Integrated secure **oAuth authentication** for user access and management.
- Containerized the project using **Docker**, orchestrating both apps (**frontend**, **backend**) along with the local PostgreSQL database.
- Built a single, cohesive development space where frontend, backend, and database run together seamlessly inside Docker.
- Gained extensive experience in monorepo project structuring, service containerization, and full-stack integration.
- with help of monorepo (version-manager) i have discussed it on the features enhancement from my linkedin community : There, i worked into 3-version's :
1st – version : simple note-tracking app (direct saving your short notes-cards).
2nd – version: added a feature of note-sharing with anyOne, and a simple and stylish landing page(using tailwind and GSAP).
3rd – version : with help from community, i got an idea of reshaping the old-version such i.e: notes-card should be saved into a subject/class-wise,AND implemented this successfully in v-3.
- Deployed to EC-2 awsamazon.

Password Manager

[GitHub](#) | [Live](#)

- Built a secure **Password Management System** enabling users to safely store and access all their credentials in one place.
- Using React + Tailwind CSS for frontend, and Node.js + Express with Prisma-ORM PostgreSQL
- Implemented bcrypt-hashing before storing the password , and random salt-rounds.
- Integrated **oAuth authentication** for for easy signin-signup and more secure.

Personal Portfolio

[GitHub](#) | [Live](#)

- Interested in Designing and implementing Styling encouraged me to do try on my personal portfolio website [Designed and Created from Scratch]
- Tools Used: Lucide-React, Framer Motion, Tailwind CSS, Three.js, React-Three-Fiber, Express.js, Node.js, NodeMailer, SMTP

Real Time Currency Converter

[sujee-iiitm](#)

- Built a real-time currency converter using third-party API integration.
- Learnt and implemented API handling, React hooks, Tailwind CSS, and lottie-react animations.

Technologies

TechStacks: C/C++ — typescript — Nodejs — Reactjs — Nextjs — WebSockets — Redis/pubs — PostgreSQL — TailwindCSS — ExpressJs. — Prisma — DDos

Tools: monorepo — Git — AWS EC-2 , CloudFront , S-3 — Docker —
